

SOFTWARE QUALITY ASSURANCE

Kirstine Mae Enriquez, LPT

IT 3202N– Software Quality Assurance

Pre Final/Final Requirements

Agile Scrum (QA-Focused, Build + Test)

- ☐ You will be divided into groups: 8 members per team (***you may choose your own groups***).
- ☐ Core Concept:
 - ☐ Me= Customer /Stakeholder
 - ☐ Each group = Scrum Team
 - ☐ Inside each group
 - > Product Owner/Scrum Master
 - > Dev + QA
 - > SRS

Customer Requirement/s

I want a simple Food Delivery App where users can order food easily

Pre Final/Final Requirements

Product Owner

- ❑ Each group's PO will:
 - > Translate the requirements into:
 - User Stories
 - Product Backlog

Ex:

- As a user, I want to login so I can access my account
- As a user, I want to add items to cart

Pre Final/Final Requirements

Sprint Planning (whole team)

- ☐ Whole Team decides:
 - What to build this sprint
 - What to test
 - Task assignment

Ex:

- As a user, I want to login so I can access my account
- As a user, I want to add items to cart

Pre Final/Final Requirements

Development + QA using Agile

- ☐ Build and Test within the sprint
- ☐ Example:
 - Dev builds “Add to Cart”
 - QA immediately writes test cases
 - QA test it
 - Bugs are reported

Pre Final/Final Requirements

Sprint Review (Demo Day) – PREFINAL PRESENTATION

- ☐ Present your output (system)
- ☐ Explain what you've completed (features)

Pre Final/Final Requirements

QA Testing

❑ Per Sprint (if you have more than 1 sprint). Prepare the following :

1. Test Cases
 - For each feature built
2. Bug Reports
 - Found during testing
3. Retesting/Fix Validation
 - Dev fixes (if issues are found)

Pre Final/Final Requirements

FINAL PRESENTATION

☐ Is this system ready for release?

Presentation Structure

1. Project Overview

What system did you build?
Key features included

2. Scrum Journey

Number of sprints completed
What was done per sprint
Challenges encountered

Pre Final/Final Requirements

3. Testing Strategy

Explain:

What you tested

Types of testing used:

- Functional
- Regression etc.

4. Test Cases

Present 2-3 strong test cases

Explain:

Steps

Expected Results

Pre Final/Final Requirements

5. Bug Reports

Present:

- Top bugs found
- Severity (High/Medium/Low)

6. Regression Testing

- What bugs were fixed?
- Did anything break after fixes

Pre Final/Final Requirements

5. QA Summary Report

Present:

- Total Case Executed
- Total Bugs found
- Critical issues remaining

Customer Requirements:

- Browse Menu
 - Users should see a list of food items
 - Each item has a name, description, and price
 - Menu should be easy to read
- Login / Account
 - Users can login and logout
 - Users can create new account
 - Security should prevents wrong logins

Customer Requirements:

- Optional/Good to have Features
 - Promo Codes/discount
 - Delivery tracking (pending, in progress, delivered)
 - Order history /past orders
- Checkout/Place Order
 - Users can confirm their order
 - Users receive order summary with items and total
 - Orders should be “saved” somewhere
